Tell Me About the Resume

Percentage match

The Repsonse is

Here's an evaluation of the resume against the job description:

Percentage Match: 75%

Keywords Missing:

- **React/Angular/Vue:** The resume doesn't explicitly mention experience with these specific modern JavaScript frameworks, although the candidate's familiarity with JavaScript and other frontend technologies suggests potential adaptability.
- **RESTful APIs and web service integration:** The resume lacks specific mention of experience with RESTful APIs and integrating web services. The projects listed might involve these concepts but it is not explicitly stated.
- **Browser testing and debugging:** While the candidate demonstrates problem-solving skills, the resume doesn't explicitly detail experience with browser-specific testing and debugging tools or methodologies.

Final Thoughts:

The resume demonstrates a strong foundation in front-end development, showcasing skills in HTML, CSS, JavaScript, and Bootstrap. The projects section further reinforces this skillset through practical experience. The candidate's experience with Django and Python indicates a broader understanding of web development beyond front-end, which could be a valuable asset. However, to improve the match score and increase chances of passing an ATS, the candidate should add details regarding experience with modern JS frameworks (React, Angular, Vue), RESTful APIs, and browser testing and debugging. Quantifying achievements in past projects would further strengthen the resume. Adding a portfolio link showcasing work would be beneficial as well.
